

Redefining Your RxDC Process

Navigate evolving prescription drug regulatory requirements with Sequoia Insight's innovative RxDC reporting and analytics solution.

As the prescription drug regulatory landscape changes, health plans are having to adjust to meet new expectations. Emerging requirements along with vast amounts of data scattered across systems—each with different formats and standards—create a fragmented landscape that increases the risk of delays, errors, and non-compliance.

Built for RxDC, Scalable for What's Next

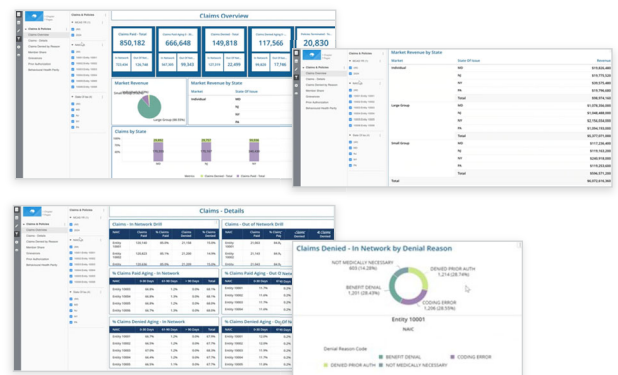

Our automated, cloud-based solution simplifies RxDC reporting today and is fully equipped to scale and support tomorrow's initiatives, such as Transparency in Coverage (TiC). Using your organization's data, our solution applies process data controls, reconciles against financial statements, and validates data accuracy, delivering a holistic view of your prescription drug information while preparing you for any level of regulatory review.

Stay Informed and Stay Ahead

Whether you are managing fully insured employer groups, self-reporting employer groups, or ASOs, our solution keeps your plan lists and data files submission-ready and fully compliant with federal and state regulations. Additionally, our customized prescription drug reporting and drilldown capabilities ensure you are equipped to meet shifting compliance demands with speed and precision.

Our solution is expanding, ahead of prescription drug regulations—giving you clarity, accuracy, and confidence for whatever comes next.

Core Features

Process Controls

Documents and tracks all the end-to-end controls—**ensuring audit readiness.**

- Provides a holistic, easy to follow process with resource assignments, scheduling, and tracking
- Displays dashboards that quickly highlight your process, timeline, and status
- Delivers an integrated perspective for cross report quality validation
- Maintains a searchable, comment-enabled historical archive

Reconciliation

Regularly cross-checks and reconciles your data against your financial statements, medical loss ratio reports, and rate filings—**assuring continual accuracy.**

- Performs RxDC program specific and business data quality checks
- Keeps you aligned with federal and state requirements using built-in validation rules
- Alerts you to data anomalies, inconsistencies, and key variances

Visualizations

Offers continual access to dashboards, drilldowns, and submission files—**ensuring clarity on your key metrics.**

- Allows for federal and state level filings
- Presents your RxDC metrics on a year-round basis
- Supports deep dives into your prescription drug data

Automation

Executes workflows for your entire data lifecycle process—**providing efficiency and cost saving on manual processes.**

- Conducts automated accuracy checks
- Generates audit-ready plan lists and data files
- Systematizes the multi-vendor data collection process
